Re: Notice of Intent to Commence Small Mining Operations, Metalliferous Minerals Lease
ML 48316, S $\frac{1}{2}$ S $\frac{1}{2}$ Section 32, T. 9 S., R. 12 W. SLB&M, Tooele County, Utah
DOGM File No. S/045/057.

Dear Mr. Chatwin:

On October 4, 2001, I conducted an inspection of the mine site as identified in the above reference Notice of Intent to Commence Small Mining Operation ("NOI"). The lands on which you propose to stage your mining operation, as depicted in the site plan accompanying your NOI, do lie within the leased lands held by you under Metalliferous Minerals lease ML 48316. However the mouth of the mine adit and the mine tunnel lie on lands administered by the Bureau of Land Management. The boundary line between the south side of Section 32 and the adjacent BLM land crosses directly in front of the mine mouth. The prior existing mine waste dump lies on Trust lands in the S $\frac{1}{2}$ SW $\frac{1}{4}$ of Section 32, near the south quarter corner of Section 32. It is on this waste dump you have proposed to stage your equipment and housing facilities (trailer). As this site exists as previously disturbed lands, by virtue of the mine waste dump, the School and Institutional Trust Lands Administration does not object to use of this land in conjunction with Metalliferous Minerals lease ML 48316. The Trust Lands Administration considers your notification complete and at this time no additional information is required. You may commence with your plan as outlined.

Enclosed is a map compiled from a GPS survey that was conducted at the time of my October 4th inspection. Please note that the level area of the mine dump comprises an area of approximately 0.10 Acres.

Even though there is old discarded mine equipment and related mine refuse on the mine dump the Trust Lands Administration will require that all your mine related refuse be removed from the site and not added to the existing trash.

Sincerely

William M. Stokes
